Tablet 14-4-6 with Micros

General

Woodace® 14-4-6 Tablets are designed to provide safe slow feeding of newly planted landscape ornamentals. Tablets are ideal for new installations. Tablets decrease the potential for transplant failure related to moisture stress because soluble salts in the backfill are minimized. When used as directed Woodace® Tablets will not harm fine root hairs critical for absorption of water and nutrients. IBDU Slow Release Nitrogen offers exceptional slow release characteristics. Woodace® Tablets feed continuously for 12-24 months. Residual depends on soil texture, temperature, and rainfall/irrigation.

Use

Woodace® Tablets are placed around the perimeter of the existing roots during installation. The planting hole should be approximately 1/3 larger than the existing root ball. Tablets are placed 1-3" away from existing roots on, firmed back fill, 1-3" from the surface. For larger trees two layers of tablets can be used, one at a 4-6" depth and the other at a 1" depth, staggered so as not to be directly above one another.

Key Features

- SUITABLE FOR USE ON ALL LANDSCAPE PLANTS
- 57% WIN FROM IBDU SLOW RELEASED NITROGEN®
- COST EFFECTIVE LABOR SAVING WAY TO PROVIDE ESSENTIAL NUTRIENTS
- PROVIDES CRITICAL NUTRIENTS WITHOUT INCREASING SALTS IN THE BACKFILL
- PACKAGED IN WEATHER TIGHT RE-SEALABLE PLASTIC BUCKETS

BID SPECIFICATION SHEET

Description: Fertilizer Tablets with 57% WIN from IBDU® Slow Release Nitrogen, and Micronutrients.

Analysis: 14-4-6

Features: A fertilizer tablet designed for the installation and maintenance of ornamental plants, trees, and shrubs. The primary source of nitrogen is from IBDU®. Each tablet shall weigh 17 grams.

Guarantee:

| | |
|---|-------|
| Nitrogen Not Less Than..... | 14.0% |
