BOVUNG Dehydrated Manure and Organic Humus*

1 - 1 - 1

NET WT. 25 lb (11.3 kg)

GUARANTEED ANALYSIS

Total Nitrogen (N)	1.0%
0.40% other water soluble nitrogen	
0.60% water insoluble nitrogen**	
Available phosphate (P ₂ O ₅)	1.0%
Soluble potash (K ₂ O)	1.0%

Nutrients derived from manure.

Ingredients: Contains not less than 51% manure and not greater than 49% organic humus.*

* Organic humus: derived from peat, compost, forest products, manure, and/or other organic materials.

** This product contains 0.60% slow release nitrogen.

Nothing on Earth Takes The Place of Manure

BOVUNG

the real thing

BOVUNG is an All Natural Organic fertilizer. It is a plant food containing Nitrogen, Phosphate and Potassium. Part of the Nitrogen is in the form of water insoluble organic nitrogen, releasing slowly to plants as they require nitrogen. Pulverized BOVUNG mixes easily with soil and soil amendments. Produces luxurious growth in vegetables, flowers, lawns, and shrubs.

- Add organic matter to soil
- Feeds slowly as plants require
- Pulverized - mixed readily with soil
- Will not burn plant roots
- No live weed seeds

DIRECTIONS FOR USE

We recommend wearing gardening gloves when using this and other planting materials.

Lawns

For new lawns, apply one 25 lb bag for 100 sq ft and manipulate into top 4" of soil. As a topdressing, apply four 25 lb bags for 100 sq ft (approximately 1/4 inch depth). Apply any time without interfering with mowing or the use of lawn.

Vegetable and Flower Gardens

1. First weed garden beds. Then, turn over top 2" - 4" with a shovel.
2. Before planting, spread Bovung Dehydrated Manure and Organic Humus at the rate of 4 bags per 10 square feet of garden area (equal to a depth of about 2 inches).
3. Thoroughly work it into the top 4 to 6 inches of soil.
4. Feed with a plant food immediately after planting.

Shrubs, Roses, and Small Trees

1. Dig a hole at least 4 inches wider than the root ball on all sides.
2. Mix 1 part Bovung Dehydrated Manure and Organic Humus with 2 parts of existing soil. Remove enough of the new mix so that the top of the ball is flush with the surface of hole. Backfill around the sides of the new plant in its hole.
3. Water thoroughly as the modified soil is added around the plant.
4. Feed with a plant food immediately after planting.

Mr. Dealer

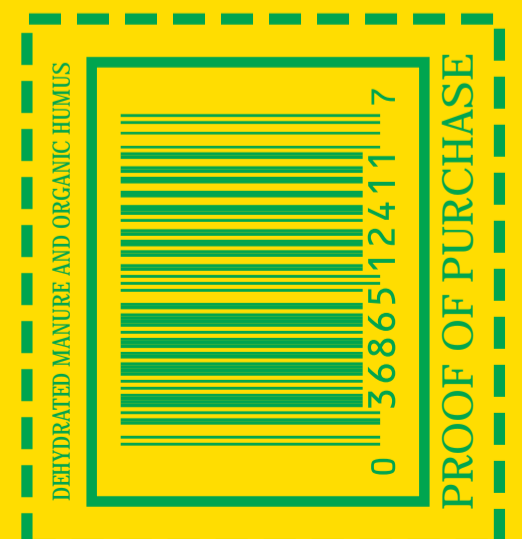

Rainwater may creep between bags and be drawn inside through the breather holes. These bags must be kept under cover to keep material dry.
